A1.2.8 i-Tree Planting Output (planted trees)

The i-Tree Planting Calculator (i-Tree) presents the model inputs (i.e., tree inventory) and outputs for trees planted by the project. The same number of trees would be planted under all analysis conditions (i.e., CEQA Proposed Project, CEQA Reduced Density Alternative, the CEQA Proposed Project with either utility option, the CEQA Reduced Density Alternative, and the Variant).

Project Report - i-Tree Planting Calculator

Location: Mountain View, California 94041
Total number of trees planted in this project: 1283
Electricity Emissions Factor: 0.00 kilograms CO2 equivalent/MWh
Fuel Emissions Factor: 0.00 kilograms CO2 equivalent/MMBtu
Lifetime: 40 years
Annual Tree Mortality: 3%

All amounts in the tables are for the full lifetime of the project.

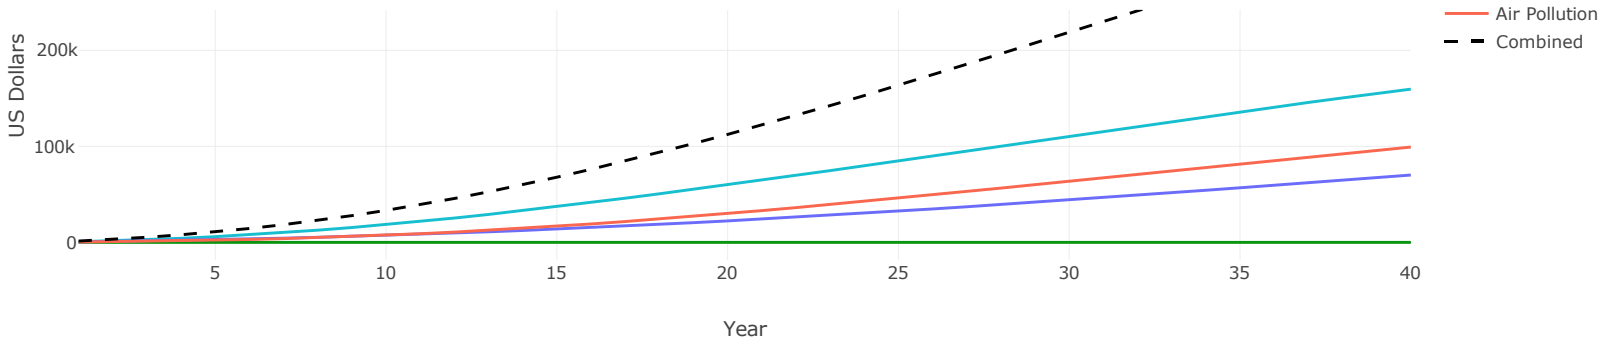
Cumulative Benefits Over Years



Mortality is modeled as a fractional (not whole) tree estimate and may not align year-over-year.
Sequestration does not account for net differences like decay.
Tree canopy cover estimate assumes no overlap between crowns.

Application v2.7.0, powered by engine v0.15.1 (APIv3) and database v12.0.77.

A1.2.9 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the operational EMFAC emission factors with CARB's off-model adjustments and the revised ROG, NO_X, and PM mobile-source emissions calculations for operation of the CEQA Proposed Project (with or without the utility options and Variant). Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors by the project-specific traffic data. Total annual operational emissions from the CalEEMod outputs were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

Adjusted Emission Factors

B.1 CEQA Proposed Project (NEPA Build Alternative 1) with CUP Option

B1.1 Construction

The CUP would be located within the footprint of a parking garage constructed under the CEQA Proposed Project. Thus, there would be no additional site disturbance, material movement, or architectural coating, and the construction activity inputs and emissions presented for the CEQA Proposed Project in Sections A1.1.2 through A1.1.5 would also occur under with the CUP Option. Refer to these sections for additional information.

Construction of the CUP would require additional off-road equipment and on-road vehicles beyond what that required for construction of the CEQA Proposed Project during Phase 3. These emissions were quantified in CalEEMod using the phasing details summarized in Section B1.1.1. Section B1.1.2 presents the CalEEMod output.

B1.1.1 Phase and Sub-Phase Codes

Table B-1 identifies the sub-phases and modeling codes for the additional construction phases that would occur under the CEQA Proposed Project with the CUP Option.

Table B-1. Additional Construction Sub-Phases and Modeling Codes for CEQA Proposed Project with the CUP Option

Phase	Sub-Phase	Code	Description
3	A	CUP-A	CUP – Site Preparation
3	B	CUP-B	CUP – Grading
3	C	CUP-C	CUP – Vertical Construction

B1.1.2 Additional CUP Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for additional construction of the CEQA Proposed Project with the CUP Option, Phase 3. These emissions were added to those quantified for the CEQA Proposed Project, Phase 3 (see Section A1.1.4).

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section B1.1.3 for the off-model calculations.

Moffett CUP Construction Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

3. Construction Emissions Details

3.1. Site Preparation (2034) - Unmitigated

3.2. Site Preparation (2034) - Mitigated

3.3. Grading (2034) - Unmitigated

3.4. Grading (2034) - Mitigated

3.5. Building Construction (2034) - Unmitigated

3.6. Building Construction (2034) - Mitigated

3.7. Building Construction (2035) - Unmitigated

3.8. Building Construction (2035) - Mitigated

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Moffett CUP Construction
Construction Start Date	1/1/2034
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	28.2
Location	37.40646021370499, -122.05214834788202
County	Santa Clara
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1702
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
User Defined Industrial	12,600	User Defined Unit	0.00	12,600	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban setting.
Land Use	12,600 square foot facility within Building 6 (no additional acres).
Construction: Construction Phases	Data provided by SKS.
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	All activity within footprint of building 6.
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.

Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.

B1.1.3 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the revised ROG, NO_X, and PM mobile-source emissions calculations for additional construction of the CEQA Proposed Project with the CUP Option, Phase 3. Emission factors were developed for each of the CalEEMod construction vehicle fleet mixes (i.e., worker, vendor, and haul) (see Section A.1.1.6). Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors by the CalEEMod trip and milage inventory. Total annual construction emissions from the CalEEMod output were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

Phase Name	Start Date	End Date	Year	Workdays	Source Type	Trips/day	Miles/trip	ROG (ton/yr)	NOx (ton/yr)	PM10E (ton/yr)	PM10D (ton/yr)	PM10T (ton/yr)	PM2.5E (ton/yr)	PM2.5D (ton/yr)	PM2.5T (ton/yr)

B1.2 Operations

Sections B1.2.1 and B1.2.2 present the CalEEMod outputs that would occur under the CEQA Proposed Project with the CUP Option. Refer to Sections A1.2.1 and A1.2.2 for CalEEMod outputs for operation of Phase 1 and Phases 1 and 2, respectively. Because the CUP would not begin operation until 2037, there would be no difference in operational activity with or without the CUP prior to 2037. Refer to Sections A1.2.5 through A1.2.8 for emissions calculations for the cooling towers, wet labs, and tree removals and plantings.

B1.2.1 Phases 1, 2, and 3 Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of land uses constructed under the CEQA Proposed Project with the CUP Option, Phases 1, 2, and 3. All structures were assumed to be fully occupied the first year following completion of construction (i.e., 2031 for Phase 1, 2034 for Phase 2, 2037 for Phase 3).

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section A1.2.9 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	9.00	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. No housing during Phase 1+2+3.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Heat Pumps at the CUP provided by SKS and modeled under Parking land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator. Added generator that would operate at the CUP.
Operations: Hearths	No hearth

B1.2.2 Full-Build Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of the CEQA Proposed Project with the CUP Option under full-build conditions (2040).

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section A1.2.9 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	13.0	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres.

Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.
Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Heat Pumps at the CUP provided by SKS and modeled under Parking land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator. Added generator that would operate at the CUP.
Operations: Hearths	No hearth

C.1 CEQA Proposed Project (NEPA Build Alternative 1) with WRF Option

C1.1 Construction

The WRF would be located within the footprint of a parking garage constructed under the CEQA Proposed Project. Thus, there would be no additional site disturbance, material movement, or architectural coating, and the construction activity inputs and emissions presented for the CEQA Proposed Project in Sections A1.1.2 through A1.1.6 would also occur under with the WRF Option. Refer to these sections for additional information.

Construction of the WRF would require additional off-road equipment and on-road vehicles beyond what is required for construction of the CEQA Proposed Project during Phase 4. These emissions were quantified in CalEEMod using the phasing details summarized in Section C1.1.1. Section C1.1.2 presents the CalEEMod output, and Section C1.1.3 presents the adjusted mobile-source calculations.

C1.1.1 Phase and Sub-Phase Codes

Table C-1 identifies the sub-phases and modeling codes for the additional construction phases that would occur under the CEQA Proposed Project with the WRF Option.

Table C-1. Additional Construction Sub-Phases and Modeling Codes for the CEQA Proposed Project with the WRF Option

Phase	Sub-Phase	Code	Description
4	A	WRF-A	WRF – Site Preparation
4	B	WRF-B	WRF – Grading
4	C	WRF-C	WRF – Vertical Construction

C1.1.2 Additional WRF Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for additional construction of the CEQA Proposed Project with the WRF Option, Phase 4. These emissions were added to those quantified for the CEQA Proposed Project, Phase 4 (see Section A1.1.5).

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section C1.1.3 for the off-model calculations.

Moffett WRF Construction Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

3. Construction Emissions Details

3.1. Site Preparation (2037) - Unmitigated

3.2. Site Preparation (2037) - Mitigated

3.3. Grading (2037) - Unmitigated

3.4. Grading (2037) - Mitigated

3.5. Building Construction (2037) - Unmitigated

3.6. Building Construction (2037) - Mitigated

3.7. Building Construction (2038) - Unmitigated

3.8. Building Construction (2038) - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Moffett WRF Construction
Construction Start Date	1/1/2037
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	28.2
Location	37.40646021370499, -122.05214834788202
County	Santa Clara
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1702
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
User Defined Industrial	15,000	User Defined Unit	0.00	15,000	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban setting.
Land Use	15,000 square foot facility within Building 6 (no additional acres).
Construction: Construction Phases	Data provided by SKS.
Construction: Off-Road Equipment	Data provided by SKS
Construction: Dust From Material Movement	All activity within footprint of building 6.
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.

C1.1.3 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the revised ROG, NO_X, and PM mobile-source emissions calculations for the additional construction of the CEQA Proposed Project with the WRF Option, Phase 4. Emission factors were developed for each of the CalEEMod construction vehicle fleet mixes (i.e., worker, vendor, and haul) (see Section A.1.1.6). Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors by the CalEEMod trip and milage inventory. Total annual construction emissions from the CalEEMod output were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

Phase Name	Start Date	End Date	Year	Workdays	Source Type	Trips/day	Miles/trip	ROG (ton/yr)	NOx (ton/yr)	PM10E (ton/yr)	PM10D (ton/yr)	PM10T (ton/yr)	PM2.5E (ton/yr)	PM2.5D (ton/yr)	PM2.5T (ton/yr)

C1.2 Operations

The CalEEMod output presents model inputs and outputs for operation of the CEQA Proposed Project with the WRF Option under full-build conditions (2040). Refer to Sections A1.2.1 through A1.2.3 for CalEEMod outputs for operation of Phase 1, Phases 1 and 2, and Phases 1, 2, and 3, respectively. Because the WRF would not begin operation until 2040, there would be no difference in operational activity with or without the WRF prior to full build. Refer to Sections A1.2.5 through A1.2.8 for emissions calculations for the cooling towers, wet labs, and tree removals and plantings.

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section A1.2.9 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	13.0	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment

Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.
Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator. Added generator that would operate at the WRF.
Operations: Hearths	No hearth

D.1 CEQA Proposed Project (NEPA Build Alternative 1) with Variant

D1.1 Construction

The same construction activities proposed and evaluated under the CEQA Proposed Project would occur under the Variant. Except for Phase 4, the construction activity inputs and emissions presented for the CEQA Proposed Project in Sections A1.1.2 through A1.1.4 would also occur under with the Variant. Refer to these sections for additional information.

During Phase 4, architectural coating emissions would differ from the CEQA Proposed Project due to the shift in residential to non-residential construction. The CalEEMod output presents model inputs and outputs for construction of the CEQA Proposed Project with the Variant, Phase 4.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section A1.1.6 for the adjusted mobile source calculations.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Moffett Alt 1 No Housing Sub-Alternative Construction Phase 4
Construction Start Date	6/1/2036
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	28.2
Location	37.40646021370499, -122.05214834788202
County	Santa Clara
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1702
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Office Park	85.0	1000sqft	2.50	85,000	0.00	0.00	—	—
Research & Development	340	1000sqft	0.00	340,000	0.00	0.00	—	—

University/College (4yr)	37.0	Student	0.00	55,000	0.00	0.00	—	—
General Office Building	0.00	1000sqft	0.00	0.00	0.00	0.00	—	—
Regional Shopping Center	20.0	1000sqft	0.00	20,000	0.00	0.00	—	—
Hotel	0.00	Room	0.00	0.00	0.00	0.00	—	—
Apartments Mid Rise	0.00	Dwelling Unit	0.00	0.00	0.00	0.00	0.00	—
Enclosed Parking with Elevator	525	1000sqft	1.40	525,000	0.00	0.00	—	—
Parking Lot	0.00	1000sqft	0.00	0.00	0.00	0.00	—	—
Road Construction	1.90	Mile	2.40	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2039	250,000	1.79	0.00	0.00

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. Linear acres includes Girard and utility improvements. No conference, hotel, surface parking, or housing during Phase 4 (sub-alternative).
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Construction: Demolition	Data provided by SKS.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e. 2036 consumption included in Phase 3.

D1.2 Operations

The CalEEMod output presents model inputs and outputs for operation of the CEQA Proposed Project with the Variant under full-build conditions (2040). Note that Alternative 1 landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the alternatives. This revision is necessary because landscaping emissions are quantified using CalEEMod defaults, which apply emission factors per square foot of non-residential and residential building space. Although the overall building square footage and landscaped area are the same between the CEQA Proposed Project and the CEQA Reduced Density Alternative with the Variant, the intensity of the default non-residential and residential emission factors differs, resulting in slightly different emissions estimates from landscaping activity. This difference is a product of the modeling method (i.e., use of defaults) and not actual conditions.

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section A1.2.9 for the off-model calculations.

Refer to Sections A1.2.1 through A1.2.3 for CalEEMod outputs for operation of Phase 1, Phases 1 and 2, and Phases 1, 2, and 3, respectively. Because the shift from housing to research square footage under the Variant would not occur until Phase 4, there would be no difference in operational activity relative to Alternative 1 prior to full build. Refer to Sections A1.2.5 through A1.2.8 for emissions calculations for the cooling towers, wet labs, and tree removals and plantings.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	13.0	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator. Added extra generator for R&D.
Operations: Hearths	No residential

E.1 CEQA Reduced Density Alternative (NEPA Build Alternative 2)

E.1 Construction

The same construction activities proposed and evaluated under the CEQA Proposed Project would occur under the CEQA Reduced Density Alternative. However, the construction schedule for some phases would be reduced, as well as interior architectural coatings. This section presents the CalEEMod outputs for the CEQA Reduced Density Alternative.

E1.1.1 Phase 1 Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for construction of the CEQA Reduced Density Alternative, Phase 1. These emissions would also occur under the CEQA Reduced Density Alternative with the Variant.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section E1.1.5 for the off-model calculations.

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
1-E-1	0.00	0.00	467,250	163,750	0.00
1-E-2	0.00	0.00	467,250	163,750	0.00
1-L	0.00	0.00	0.00	0.00	26,136

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
1-C	0.00	0.00	0.00	175,163	—
1-A	0.00	0.00	4.28	0.00	—
1-K	0.00	0.00	0.74	0.00	—
1-B	34,505	0.00	0.00	0.00	—
1-J	8,108	0.00	0.00	0.00	—
1-L	0.00	0.00	0.00	0.00	2.41
1-G	3,576	0.00	0.00	0.00	—
1-H	10,219	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Office Park	0.00	0%
Research & Development	0.00	0%
University/College (4yr)	0.00	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Hotel	0.00	0%
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%
Parking Lot	0.19	100%
Road Construction	2.22	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	200,000	9.46	0.00	0.00
2027	500,000	9.07	0.00	0.00
2028	500,000	8.57	0.00	0.00
2029	500,000	8.11	0.00	0.00
2030	250,000	7.64	0.00	0.00

8. User Changes to Default Data

Screen	Justification

Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. Linear acres includes Cody, Wescoast, and utility improvements. No conference, hotel, housing, or garage during Phase 1
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase. Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.
Construction: Demolition	Demolition of buildings outside the premises (i.e., on MVHV property) will be demolished to existing slab at-grade, with no below-grade excavation
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.

E1.1.2 Phase 2 Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for construction of the CEQA Reduced Density Alternative, Phase 2. These emissions would also occur under the CEQA Reduced Density Alternative with the Variant.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section E1.1.5 for the off-model calculations.

Moffett Alt 2 Construction Phase 2 Custom Report

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Moffett Alt 2 Construction Phase 2
Construction Start Date	6/1/2030
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	28.2
Location	37.40646021370499, -122.05214834788202
County	Santa Clara
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1702
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Office Park	57.0	1000sqft	3.50	57,000	0.00	0.00	—	—
Research & Development	225	1000sqft	0.00	225,000	0.00	0.00	—	—

University/College (4yr)	29.0	Student	0.00	42,000	0.00	0.00	—	—
General Office Building	25.0	1000sqft	1.10	25,000	0.00	0.00	—	—
Regional Shopping Center	35.0	1000sqft	0.60	35,000	0.00	0.00	—	—
Hotel	100	Room	0.00	75,000	0.00	0.00	—	—
Apartments Mid Rise	0.00	Dwelling Unit	0.00	0.00	0.00	0.00	0.00	—
Enclosed Parking with Elevator	0.00	1000sqft	0.00	0.00	0.00	0.00	—	—
Parking Lot	530	1000sqft	12.0	0.00	0.00	0.00	—	—
Road Construction	2.00	Mile	2.40	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2-K	3,576	0.00	0.00	0.00	—
2-L	10,219	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Office Park	0.00	0%
Research & Development	0.00	0%
University/College (4yr)	0.00	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Hotel	0.00	0%
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%
Parking Lot	0.19	100%
Road Construction	2.22	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2030	0.00	7.64	0.00	0.00
2031	500,000	7.14	0.00	0.00
2032	500,000	7.14	0.00	0.00
2033	250,000	7.14	0.00	0.00

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. General office includes acres for hotel. Linear acres includes Daily, Girard, and utility improvements. No housing or garage during Phase 2.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Demolition	Removal during roadway/utility.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase. Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e. 2030 consumption included in Phase 1.

E1.1.3 Phase 3 Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for construction of the CEQA Reduced Density Alternative, Phase 3. These emissions would also occur under the CEQA Reduced Density Alternative with the Variant.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section E1.1.5 for the off-model calculations.

Moffett Alt 2 Construction Phase 3 Custom Report

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Moffett Alt 2 Construction Phase 3
Construction Start Date	6/1/2033
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	28.2
Location	37.40646021370499, -122.05214834788202
County	Santa Clara
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1702
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Office Park	40.0	1000sqft	2.50	40,000	0.00	0.00	—	—
Research & Development	145	1000sqft	0.00	145,000	0.00	0.00	—	—

University/College (4yr)	20.0	Student	0.00	30,000	0.00	0.00	—	—
General Office Building	0.00	1000sqft	0.00	0.00	0.00	0.00	—	—
Regional Shopping Center	20.0	1000sqft	0.00	20,000	0.00	0.00	—	—
Hotel	0.00	Room	0.00	0.00	0.00	0.00	—	—
Apartments Mid Rise	0.00	Dwelling Unit	0.00	0.00	0.00	0.00	0.00	—
Enclosed Parking with Elevator	555	1000sqft	1.40	555,000	0.00	0.00	—	—
Parking Lot	255	1000sqft	6.00	0.00	0.00	0.00	—	—
Road Construction	1.30	Mile	1.60	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

3-H	10,219	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Office Park	0.00	0%
Research & Development	0.00	0%

University/College (4yr)	0.00	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Hotel	0.00	0%
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%
Parking Lot	0.00	100%
Road Construction	2.22	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2033	0.00	7.14	0.00	0.00
2034	500,000	7.14	0.00	0.00
2035	500,000	7.14	0.00	0.00
2036	250,000	1.79	0.00	0.00

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, academic, and active. Linear acres includes Daily, Girard, and utility improvements. No housing or garage during Phase 3.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used when project-specific data are not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.

Construction: Demolition	Removal during roadway/utility.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase. Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e. 2033 consumption included in Phase 2.

E1.1.4 Phase 4 Construction CalEEMod Output

The CalEEMod output presents model inputs and outputs for construction of the CEQA Reduced Density Alternative, Phase 4.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section E1.1.5 for the off-model calculations.

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Office Park	0.00	0%
Research & Development	0.00	0%
University/College (4yr)	0.00	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Hotel	0.00	0%
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%
Parking Lot	0.00	100%
Road Construction	0.00	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2036	0.00	1.79	0.00	0.00
2037	500,000	1.79	0.00	0.00
2038	500,000	1.79	0.00	0.00
2039	250,000	1.79	0.00	0.00

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. Linear acres includes Girard and utility improvements. No conference, hotel, or surface parking during Phase 4.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Construction: Demolition	Data provided by SKS.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e. 2036 consumption included in Phase 3.

E1.1.5 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the revised ROG, NO_X, and PM mobile-source emissions calculations for construction of the CEQA Reduced Density Alternative (with and without the variant). Emission factors were developed for each of the CalEEMod construction vehicle fleet mixes (i.e., worker, vendor, and haul) (see Section A.1.1.6). Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors by the CalEEMod trip and milage inventory. Total annual construction emissions from the CalEEMod output were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

Phase Name	Start Date	End Date	Year	Workdays	Source Type	Trips/day	Miles/trip	ROG (ton/yr)	NOx (ton/yr)	PM10E (ton/yr)	PM10D (ton/yr)	PM10T (ton/yr)	PM2.5E (ton/yr)	PM2.5D (ton/yr)	PM2.5T (ton/yr)

E1.2 Operations

Sections E1.2.1 through E1.2.5 below present the CalEEMod outputs that would occur under the CEQA Reduced Density Alternative. Refer to Sections A1.2.5 through A1.2.8 for emissions calculations for the cooling towers, wet labs, and tree removals and plantings.

E1.2.1 Phase 1 Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of land uses constructed under the CEQA Reduced Density Alternative, Phase 1. All structures were assumed to be fully occupied the first year following completion of construction (i.e., 2031 for Phase 1). Note that CEQA Proposed Project, Phase 1, landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the CEQA Proposed Project and the CEQA Reduced Density Alternative. Refer to Section D1.2, *Operations*, for additional information.

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section E1.2.5 for the off-model calculations.

Moffett Alt 1 Operation Phase 1 Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. No conference, hotel, housing, or garage during Phase 1.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by EKI and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Hearths	No hearth

E1.2.2 Phases 1 and 2 Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of land uses constructed under the CEQA Reduced Density Alternative, Phases 1 and 2. All structures were assumed to be fully occupied the first year following completion of construction (i.e., 2031 for Phase 1, 2034 for Phase 2). Note that CEQA Proposed Project, Phases 1 and 2, landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the CEQA Proposed Project and CEQA Reduced Density Alternative. Refer to Section D1.2, *Operations*, for additional information.

Note that the mitigated condition in all CalEEMod outputs does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section E1.2.5 for the off-model calculations.

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	LL-1	Replace Gas Powered Landscape Equipment with Zero-Emission Landscape Equipment
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	6.00	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. No housing or garage during Phase 1+2.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator
Operations: Architectural Coatings	Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.
Operations: Hearths	No hearth

E1.2.3 Phases 1, 2, and 3 Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of land uses constructed under the CEQA Reduced Density Alternative, Phases 1, 2, and 3. All structures were assumed to be fully occupied the first year following completion of construction (i.e., 2031 for Phase 1, 2034 for Phase 2; 2037 for Phase 3). Note that CEQA Proposed Project, Phases 1, 2, and 3, landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the alternatives. Refer to Section D1.2, *Operations*, for additional information.

Note that the mitigated condition in all CalEEMod outputs does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section E1.2.5 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	8.00	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. No housing during Phase 1+2+3.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator
Operations: Architectural Coatings	Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.
Operations: Hearths	No hearth

E1.2.4 Full-Build Operations CalEEMod Output

The CalEEMod output presents model inputs and outputs for operation of the CEQA Reduced Density Alternative under full-build conditions (2040). Note that Alternative 1 landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the alternatives. Refer to Section D1.2, *Operations*, for additional information.

Note that the mitigated condition in all CalEEMod outputs does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section E1.2.5 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Emergency Generator	Diesel	12.0	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment

Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.
Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator
Operations: Hearths	No hearth
Operations: Architectural Coatings	Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.

E1.2.5 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the revised ROG, NO_X, and PM mobile-source emissions calculations for operation of the CEQA Reduced Density Alternative (with or without the variant). Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors (see Section A1.2.9) by the project-specific traffic data. Total annual operational emissions from the CalEEMod outputs were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

F.1 CEQA Reduced Density Alternative (NEPA Build Alternative 2) with Variant

F1.1 Construction

The same construction activities proposed and evaluated under the CEQA Reduced Density Alternative would occur under the Variant. Except for Phase 4, the construction activity inputs and emissions presented for the CEQA Reduced Density Alternative in Sections E1.1.1 through E1.1.3 would also occur under with the Variant. Refer to these sections for additional information.

During Phase 4, architectural coating emissions would differ from the CEQA Reduced Density Alternative due to the shift in residential to non-residential construction. The CalEEMod output presents model inputs and outputs for construction of the CEQA Reduced Density Alternative with the Variant, Phase 4.

Neither total construction nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the CalEEMod trip and milage inventory and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total phase emissions recalculated. Refer to Section E1.1.5 for the off-model calculations.

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-4*	Use Local and Sustainable Building Materials
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Office Park	0.00	0%
Research & Development	0.00	0%
University/College (4yr)	0.00	0%
General Office Building	0.00	0%
Regional Shopping Center	0.00	0%
Hotel	0.00	0%
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%
Parking Lot	0.00	100%
Road Construction	0.00	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2036	0.00	1.79	0.00	0.00
2037	500,000	1.79	0.00	0.00
2038	500,000	1.79	0.00	0.00
2039	250,000	1.79	0.00	0.00

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres. Linear acres includes Girard and utility improvements. No conference, hotel, or surface parking during Phase 4.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS.
Construction: Dust From Material Movement	Data provided by SKS.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific data were not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Construction: Demolition	Data provided by SKS.
Construction: Electricity	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e. 2036 consumption included in Phase 3.

F1.2 Operations

The CalEEMod output presents model inputs and outputs for operation of the CEQA Reduced Density Alternative with the Variant under full-build conditions (2040). Note that Alternative 1 landscaping emissions (including additional energy emissions from electrified equipment under the mitigated condition) were used in place of the estimates shown in this file to ensure consistency between the alternatives. Refer to Section D1.2, *Operations*, for additional information.

Note that the mitigated condition does not account for Mitigation Measure TRAN-1. Based on modeling from Fehr & Peers, the measure would achieve a 7.5 percent reduction in trips and VMT (Tan pers. comm. [A]). Accordingly, mobile-source emissions from CalEEMod were manually reduced by 7.5 percent to account for implementation of Mitigation Measure TRAN-1.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section E1.2.5 for the off-model calculations.

Refer to Sections E1.2.1 through E1.2.3 for CalEEMod outputs for operation of Phase 1, Phases 1 and 2, and Phases 1, 2, and 3, respectively. Because the shift from housing to research square footage under the Variant would not occur until Phase 4, there would be no difference in operational activity relative to Alternative 2 prior to full build. Refer to Sections A1.2.5 through A1.2.8 for emissions calculations for the cooling towers, wet labs, and tree removals and plantings.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Emergency Generator	Diesel	13.0	4.00	150	670	0.73

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Project in urban environment
Land Use	Office acres include acres for office, R&D, and academic. Active use acres partially shared with R&D acres.
Construction: Construction Phases	Data provided by SKS
Construction: Off-Road Equipment	Data provided by SKS. Accounts for project design feature of Tier 4 engines (equipment greater than 25 HP).
Construction: Dust From Material Movement	Data provided by SKS. Accounts for CBP AIR-2.
Construction: Trips and VMT	Data provided by SKS. Defaults used where project-specific inputs not available.
Construction: Paving	Data provided by SKS
Construction: On-Road Fugitive Dust	Accounts for CBP AIR-2. Silt loading modified per BAAQMD CEQA Guidelines.
Construction: Architectural Coatings	Distributed coating square footages to phases based on buildings constructed in each phase.
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.
Operations: Energy Use	Energy consumption value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for energy efficiency and renewable energy project design elements. No building natural gas consumption.
Operations: Water and Waste Water	Indoor and outdoor water consumption values are for all project land uses (estimates by building type not available). Indoor estimate modeled under R&D land use type. Outdoor water estimate modeled under University land use type. Outdoor intensity factors adjusted to account for use of reclaimed water (no supply). Estimates provided by SKS and account for water efficiency project design elements. Cooling tower water estimate modeled under R&D land use type (outdoor, not reclaimed).
Operations: Solid Waste	Waste generation value is for all project land uses (estimates by building type not available). Estimate provided by SKS and accounts for waste reduction project design elements.

Operations: Refrigerants	Refrigerant quantities for project-wide Centrifugal Chillers and Building A/C Heat Pumps provided by SKS and modeled under Office and R&D land use type. Default pumps from other land use types removed to avoid double counting. Defaults retained for building refrigerators and freezers.
Operations: Generators + Pumps EF	TOG/ROG, NOx, and PM emission factors revised for Tier 4 generator standards per Cal. Code Regs. Tit. 13, § 242 Generator Standards.
Operations: Emergency Generators and Fire Pumps	Data per SKS. 2-4 hr./mo. (testing) (50 annual hours); 100 hrs./year (emergency per BAAQMD) = 150 total annual hours per generator. Added extra generator for R&D.
Operations: Hearths	No hearth
Operations: Architectural Coatings	Exterior coating equal to Alt 1. Interior coating accounts for reduced floor/ceiling slab.

G.1 Existing Conditions

The CalEEMod output presents model inputs and outputs for operational land uses under existing conditions (2024).

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section H1.1.5 for the off-model calculations.

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Characteristics: Project Details	Project in urban environment
Characteristics: Utility Information	Per PG&E's 2023 PCL adjusted to account for RPS. CO2 is CO2e.

H.1 NEPA No-Action Alternative

The following sections present the CalEEMod model inputs and outputs for operational land uses under the NEPA No-Action Alternative. Emissions were modelled under 2031, 2034, 2037, and 2040 conditions to enable comparison with partial operational emissions for the project under these years.

H1.1 2031 Operation

The CalEEMod output presents model inputs and outputs for operation of the NEPA No-Action Alternative under 2031 conditions.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section H1.1.5 for the off-model calculations.

H1.2 2034 Operation

The CalEEMod output presents model inputs and outputs for operation of the NEPA No-Action Alternative under 2034 conditions.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section H1.1.5 for the off-model calculations.

Moffett No Action 2034 Operation Custom Report

H1.3 2037 Operation

The CalEEMod output presents model inputs and outputs for operation of the NEPA No-Action Alternative under 2037 conditions.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section H1.1.5 for the off-model calculations.

H1.4 2040 Operation

The CalEEMod output presents model inputs and outputs for operation of the NEPA No-Action Alternative under 2040 conditions.

Neither total operation nor mobile-source emissions results in the CalEEMod output are adjusted to reflect the June 12, 2025, congressional disapproval of the ACT, Warranty Phase 1, and Omnibus regulations. CARB has developed off-model adjustment factors for NO_X, ROG, PM_{10}, and $PM_{2.5}$ that remove the estimated emissions benefits attributed to regulations. Emissions of these pollutants were separately quantified using the project-specific traffic data and emission factors from EMFAC2021 with the off-model adjustments per CARB's guidance. The adjusted mobile-source emissions were used in place of the CalEEMod output for mobile sources and the total operational emissions recalculated. Refer to Section H1.1.5 for the off-model calculations.

H1.5 Adjusted Mobile-Source ROG, NO_X, and PM Emission Factors and Calculations

This section provides the revised ROG, NO_X, and PM mobile-source emissions calculations for operation of the existing land uses and the No Build Alternative. Adjusted ROG, NO_X, and PM mobile-source emissions were estimated by multiplying the adjusted emission factors (see Section A1.2.9) by the project-specific traffic data. Total annual operational emissions from the CalEEMod outputs were revised, based on the difference in mobile-source emissions between the adjusted (i.e., off-model) and unadjusted (i.e., CalEEMod) results. The revised results were then used to calculate average daily emissions for report presentation.

	Existing	No Build			
Year	2024	2031	2034	2037	2040
VMT/yr	332,500	3,458,000	3,458,000	3,458,000	3,458,000
Trips/yr	43,750	523,600	523,600	523,600	523,600

Year	ROG (ton/yr)	NOx (ton/yr)	PM10E (ton/yr)	PM10D (ton/yr)	PM10T (ton/yr)	PM2.5E (ton/yr)	PM2.5D (ton/yr)	PM2.5T (ton/yr)

Appendix B
ROG, NO_X, and PM Results without November 2025 CARB Adjustments for Removal of Mobile-Source Regulations

Emissions of reactive organic gases (ROGs), nitrogen oxides (NO_X), and particulate matter (PM) from mobile sources have been adjusted, based on guidance from CARB (2025d) and EPA (2025c) to remove effects of the Advanced Clean Trucks (ACT), Zero-Emission Airport Shuttle, Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions (Warranty Phase 1), and Heavy-Duty Omnibus (Omnibus) regulations. As discussed in Section 3.3.1, *Methodology,* in Chapter 3, *Air Quality*, California can no longer enforce these regulations pursuant to joint resolutions signed by President Trump in June 2025.[45] Because the resolutions are currently being litigated, this appendix provides the unadjusted mass emission results for full disclosure in case the resolutions are overturned and the regulations deemed enforceable.

The same table names and numbers that are presented in Section 3.3.3, *Impacts*, are used in this appendix. The only differences between each table in Section 3.3.3 and its corresponding table in this appendix are the ROG, NO_X, and PM emissions contributions from mobile sources. Note that this appendix includes only those tables from Chapter 3 with emissions results (e.g., Table 3-14 is excluded because it does not have emissions results that were adjusted to account for CARB's mobile-source factors).

[45] See Pub. L. 119-15, 139 Stat. 65 (June 12, 2025); Pub. L. 119-17, 139 Stat. 67 (June 12, 2025).

de minimis Level[d]	—	—	—	—	100	100	—	100	100

Source: Appendix A

a. Exceedances of thresholds (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c. In developing the thresholds, the Air District considered levels at which project emissions would be cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

d. The *de minimis* levels drawn from 40 CFR Section 93.153 are based on the project area attainment status for the NAAQS (see Table 3-3). Although the project area is in attainment for SO_2, because SO_2 is a precursor to $PM_{2.5}$, the $PM_{2.5}$ *de minimis* level applies. Exceedances of the *de minimis* levels would be adverse under NEPA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gases; SO_2 = sulfur dioxide; — = no threshold

Table 3-15. Estimated Average Daily Unmitigated Criteria Pollutant Emissions from Construction of the CEQA Proposed Project[a]

Source: Appendix A

[a.] Emissions results include implementation of Mitigation Measures AQ-5, AQ-6, and TRAN-1. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

[b.] Total emissions consist of exhaust and fugitive dust emissions.

[c] The mitigation analysis conservatively assumes only use of low-VOC paints (i.e., less than 50 grams per liter VOC), which is required, at a minimum, by Mitigation Measure AQ-5. The measure also requires no-VOC paints (i.e., less than 5 grams per liter of VOC) where locally (i.e., within 50 miles of the Project Site) and commercially available for the coating type. Where no-VOC paints are used, emissions would be less than presented above.

[d.] Refer to Table 3-13 for emissions by source.

[e.] Total project (2040) emissions minus total existing (2024) emissions.

[f.] In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gas

Source: Appendix A

a. Values are rounded to the nearest whole number. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c. Unmitigated construction emissions (Table 3-15) plus unmitigated operational emissions from buildings constructed during Phase 1. Operational emissions were quantified under 2031 opening conditions and held constant in 2032 and 2033. Emissions from existing land uses (Table 3-13) are subtracted from the operational results.

d. Unmitigated construction emissions (Table 3-15) plus unmitigated operational emissions from buildings constructed during Phases 1 and 2. Operational emissions were quantified under 2034 opening conditions and held constant in 2035 and 2036. Emissions from existing land uses (Table 3-13) are subtracted from the operational results.

e. Unmitigated construction emissions (Table 3-15) plus unmitigated operational emissions from buildings constructed during Phases 1 through 3. Operational emissions were quantified under 2037 opening conditions and held constant in 2038 and 2039. Emissions from existing land uses (Table 3-13) are subtracted from the operational results.

f. In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gases

de minimis Level[e]	100	100	100	100

Source: Appendix A

a. Values are rounded to the nearest whole number. Exceedances of *de minimis* levels (if any) are shown in **bold** with underline.

b. The WRF would be constructed in 2037 and 2038. Emissions during all other construction years would be the same as presented in Table 3-21 for NEPA Build Alternative 1.

c. Presents the total emissions estimate during each year of construction.

d. Total $PM_{2.5}$ emissions consist of exhaust and fugitive dust emissions.

e. The *de minimis* levels drawn from 40 CFR Section 93.153 and are based on the project area attainment status for the NAAQS (see Table 3-3). Although the project area is in attainment for SO_2, because SO_2 is a precursor for $PM_{2.5}$, the $PM_{2.5}$ *de minimis* level applies. Exceedances of the *de minimis* levels would be adverse under NEPA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; ROG = reactive organic gases; SO_2 = sulfur dioxide

Table 3-31. Estimated Total Annual Unmitigated Criteria Pollutant Emissions from Operation of NEPA Build Alternative 1 with the WRF Option[a]

Alternative	Annual (tons per year)			
	ROG	NO_X	$PM_{2.5}$ (total)[b]	SO_2

[a.] Values are rounded to the nearest whole number. Exceedances of *de minimis* levels (if any) are shown in **bold** with underline.

[b.] The WRF would be constructed in 2037 and 2038 and begin operation in 2040. Emissions during years prior to 2034 would be the same as presented in Table 3-23 for NEPA Build Alternative 1.

[c.] Total emissions consist of exhaust and fugitive dust emissions.

[d.] Unmitigated construction emissions (Table 3-30 for 2037 and 2038; Table 3-21 for 2039) plus unmitigated operational emissions from buildings constructed during Phase 1. Operational emissions were quantified under 2037 opening conditions and held constant in 2038 and 2039. Emissions from existing land uses under 2037 conditions are subtracted from the operational results.

[e.] The *de minimis* levels drawn from 40 CFR Section 93.153 and are based on the project area attainment status for the NAAQS (see Table 3-3). Although the project area is in attainment for SO_2, because SO_2 is a precursor for $PM_{2.5}$, the $PM_{2.5}$ *de minimis* level applies. Exceedances of the *de minimis* levels would be adverse under NEPA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; ROG = reactive organic gases; SO_2 = sulfur dioxide; — = no threshold

Table 3-33. Estimated Average Daily Unmitigated Criteria Pollutant Emissions from Construction of the CEQA Proposed Project with the CUP Option[a]

a. Emissions results include implementation of Mitigation Measures AQ-5, AQ-6, and TRAN-1. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c. The mitigation analysis conservatively assumes only use of low-VOC paints (i.e., less than 50 grams per liter VOC), which is required, at a minimum, by Mitigation Measure AQ-5. The measure also requires no-VOC paints (i.e., less than 5 grams per liter of VOC) where locally (i.e., within 50 miles of the Project Site) and commercially available for the coating type. Where no-VOC paints are used, emissions would be less than presented above.

d. Refer to Table 3-13 for emissions by source.

e. Total project (2040) emissions minus total existing (2024) emissions.

f. In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gases

Air District Threshold[f]	54	54	82	54	10	10	15	10

Source: Appendix A

a. Emissions results include implementation of Mitigation Measures AQ-5, AQ-6, and TRAN-1. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c The mitigation analysis conservatively assumes only use of low-VOC paints (i.e., less than 50 grams per liter VOC), which is required, at a minimum, by Mitigation Measure AQ-5. The measure also requires no-VOC paints (i.e., less than 5 grams per liter of VOC) where locally (i.e., within 50 miles of the Project Site) and commercially available for the coating type. Where no-VOC paints are used, emissions would be less than presented above.

d. Refer to Table 3-13 for emissions by source.

e. Total project (2040) emissions minus total existing (2024) emissions.

f. In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gases

Table 3-45. Estimated Average Daily and Annual Unmitigated and Mitigated ROG Emissions from Concurrent Construction and Partial Operation of the CEQA Proposed Project with the Variant[a]

	Unmitigated	With Mitigation[e]	Unmitigated	With Mitigation[e]
2036	**86**	**65**	**16**	**12**
2037	**102**	**78**	**19**	**14**
2038	**118**	**85**	**21**	**15**
2039	**109**	**82**	**20**	**15**
Air District Threshold[f]	54	54	10	10

Source: Appendix A

a. Values are rounded to the nearest whole number. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. The intensity of construction for the CEQA Proposed Project with or without the Variant would be the same, except for architectural coatings during Phase 4. Emissions of all pollutants except ROG during Phase 4 (2036–2039) would be the same as presented in Tables 3-19 (unmitigated) and 3-20 (mitigated) for the CEQA Proposed Project. For Phase 4 (2036–2039), results reflect construction emissions (Table 3-42) plus operational emissions from buildings constructed during Phases 1 through 3. Operational emissions were quantified under 2037 opening conditions and held constant in future years. Emissions from existing land uses (Table 3-13) are subtracted from the operational results.

c. Presents the average emissions estimate during a single day of construction in each year.

d. Presents the total emissions estimate during each year of construction.

e. Emissions results include implementation of Mitigation Measures AQ-1, AQ-4 through AQ-6, and TRAN-1. Mitigation Measures AQ-2 and HAZ-1 are not quantified; Mitigation Measure GHG-1 is partially quantified (off-road engine controls). Mitigation Measures AQ-3 and HAZ-1 would not reduce ROG emissions

f. In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

ROG = reactive organic gases

2038[e]	15	22	5	< 1
2039[e]	13	10	5	< 1
de minimis Level[f]	100	100	100	100

Source: Appendix A

a. Values are rounded to the nearest whole number. Exceedances of *de minimis* levels (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c. Unmitigated construction emissions (Table 3-55) plus unmitigated operational emissions from buildings constructed during Phase 1. Operational emissions were quantified under 2031 opening conditions and held constant in 2032 and 2033. Emissions from existing land uses under 2031 conditions are subtracted from the operational results.

d. Unmitigated construction emissions (Table 3-55) plus unmitigated operational emissions from buildings constructed during Phases 1 and 2. Operational emissions were quantified under 2034 opening conditions and held constant in 2035 and 2036. Emissions from existing land uses under 2034 conditions are subtracted from the operational results.

e. Unmitigated construction emissions (Table 3-55) plus unmitigated operational emissions from buildings constructed during Phases 1 through 3. Operational emissions were quantified under 2037 opening conditions and held constant in 2038 and 2039. Emissions from existing land uses under 2037 conditions are subtracted from the operational results.

f. The *de minimis* levels drawn from 40 CFR Section 93.153 and are based on the project area attainment status for the NAAQS (see Table 3-3). Although the project area is in attainment for SO_2, because SO_2 is a precursor for $PM_{2.5}$, the $PM_{2.5}$ *de minimis* level applies. Exceedances of the *de minimis* levels would be adverse under NEPA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; ROG = reactive organic gases; SO_2 = sulfur dioxide

Table 3-58. Estimated Average Daily Unmitigated and Mitigated ROG Emissions from Construction of Phase 4 under the CEQA Reduced Density Alternative with the Variant[a]

	Average Daily (pounds per day)[c]	
Selected Construction Year[b]	Unmitigated	With Mitigation[d]
2036	13	5
2037	10	3

	Average Daily (pounds per day)[c]	
Selected Construction Year[b]	Unmitigated	With Mitigation[d]
2038	26	10
2039	17	7
Air District Threshold[e]	54	54

Source: Appendix A

a. Values are rounded to the nearest whole number. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. The intensity of construction for the CEQA Proposed Project with or without the Variant would be the same, except for architectural coatings during Phase 4. Emissions of all pollutants except ROG during Phase 4 (2036–2039) would be the same as presented in Tables 3-49 (unmitigated) and 3-50 (mitigated) for the CEQA Reduced Density Alternative.

c. Presents the average emissions estimate during a single day of construction in each year.

d. Emissions results include implementation of Mitigation Measures AQ-1 and AQ-4. Mitigation Measures AQ-2 and HAZ-1 are not quantified; Mitigation Measure GHG-1 is partially quantified (off-road engine controls). Mitigation Measures AQ-3 and HAZ-1 would not reduce ROG emissions.

e. In developing the average daily thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA. The Air District also considers fugitive dust emissions significant without application of BMPs.

ROG = reactive organic gases

Air District Threshold[f]	54	54	82	54	10	10	15	10

Source: Appendix A

a. Emissions results include implementation of Mitigation Measures AQ-5, AQ-6, and TRAN-1. Exceedances of Air District thresholds (if any) are shown in **bold** with underline.

b. Total emissions consist of exhaust and fugitive dust emissions.

c The mitigation analysis conservatively assumes only use of low-VOC paints (i.e., less than 50 grams per liter VOC), which is required, at a minimum, by Mitigation Measure AQ-5. The measure also requires no-VOC paints (i.e., less than 5 grams per liter of VOC) where locally (i.e., within 50 miles of the Project Site) and commercially available for the coating type. Where no-VOC paints are used, emissions would be less than presented above.

d. Refer to Table 3-13 for emissions by source.

e. Total project (2040) emissions minus total existing (2024) emissions.

f. In developing the thresholds, the Air District considered levels at which project emissions are cumulatively considerable. Consequently, exceedances of project-level thresholds would be cumulatively considerable under CEQA.

NO_X = nitrogen oxides; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter; PM_{10} = particulate matter 10 microns or less in diameter; ROG = reactive organic gases

A.1 CEQA Proposed Project (NEPA Build Alternative 1)

A.1.1 Construction

A1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project.

A1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project.

A.1.2 Operations

A1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Proposed Project.

A.1.3 Health Risk Results Summaries

A1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Proposed Project.

A1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the CEQA Proposed Project.

A1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the CEQA Proposed Project.

A1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the CEQA Proposed Project.

B.1 CEQA Proposed Project (NEPA Build Alternative 1) with CUP Option

B.1.1 Construction

B1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project with CUP Option.

B1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the Alternative 1 with CUP Option.

B.1.2 Operations

B1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Proposed Project with CUP Option.

B.1.3 Health Risk Results Summaries

B1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Proposed Project with CUP Option.

B1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the Alternative 1 with CUP Option.

B1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the Alternative 1 with CUP Option.

B1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the Alternative 1 with CUP Option.

C.1 CEQA Proposed Project (NEPA Build Alternative 1) with WRF Option

C.1.1 Construction

C1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project with WRF Option.

C1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the Alternative 1 with WRF Option.

C.1.2 Operations

C1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Proposed Project with WRF Option.

C.1.3 Health Risk Results Summaries

C1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Proposed Project with the WRF Option.

C1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the Alternative 1 with WRF Option.

C1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the Alternative 1 with WRF Option.

C1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the Alternative 1 with WRF Option.

D.1 CEQA Proposed Project (NEPA Build Alternative 1) with Variant

D.1.1 Construction

D1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project with the Variant.

D1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Proposed Project with the Variant.

D.1.2 Operations

D1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Proposed Project with the Variant.

D.1.3 Health Risk Results Summaries

D1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Proposed Project with the Variant.

D1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the CEQA Proposed Project with the Variant.

D1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the CEQA Proposed Project with the Variant.

D1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the CEQA Proposed Project with the Variant.

E.1 CEQA Reduced Density Alternative (NEPA Build Alternative 2)

E.1.1 Construction

E1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Reduced Density Alternative.

E1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Reduced Density Alternative.

E.1.2 Operations

E1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Reduced Density Alternative.

E.1.3 Health Risk Results Summaries

E1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative.

E1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative .

E1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative .

E1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the CEQA Reduced Density Alternative.

F.1 CEQA Reduced Density Alternative (Build Alternative 2) with Variant

F.1.1 Construction

F1.1.1 AERMOD Unmitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the unmitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Reduced Density Alternative with the Variant.

F1.1.2 AERMOD Mitigated Emission Rate Calculations

The Microsoft Excel spreadsheets show the mitigated construction emission rate calculations for both DPM and $PM_{2.5}$ for input into each AERMOD source for each phase of construction under the CEQA Reduced Density Alternative with the Variant.

F.1.2 Operations

F1.2.1 AERMOD Emission Rate Calculations

The Microsoft Excel spreadsheets show the operational emission rate calculations for all TACs for input into each AERMOD source under the CEQA Reduced Density Alternative with the Variant.

F.1.3 Health Risk Results Summaries

F1.3.1 Cancer Risks

The Microsoft Excel spreadsheets show the cancer risk calculations for each HRA scenario, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative with the Variant.

F1.3.2 Non-Cancer Hazard Risks

The Microsoft Excel spreadsheets show the non-cancer hazard risk calculations, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative with the Variant.

F1.3.3 $PM_{2.5}$ Concentrations

The Microsoft Excel spreadsheets show the $PM_{2.5}$ calculations, including both construction and operations at each receptor location under the CEQA Reduced Density Alternative with the Variant.

F1.3.4 Cumulative Health Risks

The Microsoft Excel spreadsheets show the cumulative health risk calculations, including both construction and operations at the maximally affected receptor locations under the CEQA Reduced Density Alternative with the Variant.
