## NASA Ames Research Center Drinking Water System

## 2024 Lead Service Line Inventory

October 29, 2024

## Dear Ames Community,

As part of our commitment to maintaining a safe drinking water supply, we are updating you on the 2024 Lead Service Line Inventory. This inventory is part of our compliance with state and federal regulations for our drinking water system, including the most recent update completed October 15, 2024. Our Lead Service Line Inventory records all service lines, which are the pipes that connect your building's plumbing to the main water line, including dedicated fire lines. The goal is to ensure all service lines meet safety standards and do not contain lead, which can pose health risks over time if present.

It is important to clarify that all service lines within NASA Ames' water system have been confirmed as non-lead. These current material identifications are primarily based on visual inspections with support from construction records. Additionally, any service lines that are four (4) inches in diameter or larger, as well as service lines and buildings installed after January 1, 1986, are determined by the US Environmental Protection Agency and State of California to be free of lead. This determination is based on federal and state standards that have mandated the use of lead-free materials for service lines since 1986.

Facilities such as storage sheds, which do not have drinking water supplies or other water service lines, are not included in this inventory update. This Lead Service Line Inventory will be updated as new information and inspections become available.

If you have questions about your specific building or if you do not see your building listed in the inventory, please feel free to reach out. I am available to discuss and address any concerns you may have.

Sincerely,

## Jeanne

Jeanne Sabin
Water Compliance Program Manager
Environmental Management Division
NASA Ames Research Center
M/S 204-15
Building N204, Room 102-11
Moffett Field, CA 94035-0001

Pronouns: She, Hers

Purpose of this worksheet: To provide a template for water systems to track materials for each service line in their distribution system.

General Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The columns with the aqual shading are required for the Inventory Summary stal. Note that users can freeze panes to enable them to see the headings and notes when entering data. The worksheet includes campies own and is formatted for approximately 10,000 entries. Please refer to the red triangle in the upper conner for additional instructions.
